Storage media (hard drive, USB memory etc.):	Operating system (Windows, Mac, Linux etc):
Short problem description:	Important files types and/or folders:

General terms:

Examination/diagnosis of crashed hard disk: A flat rate of €160 is charged. The cost for examination is charged even if the hard disk is too seriously damaged for a data recovery to be possible.

Price: A successful recovery of a defective hard drive costs €500—€1.600 incl. analysis and spare parts. Call us or send an e-mail for details regarding prices.

Spare parts: The cost for spare parts that may be necessary for an advanced recovery is charged to the client even if the operation doesn't give the desired result in the end.

Ahlberg data can not guarantee that every single data file can be recovered in working condition from the crashed hard drive.

Secrecy: Ahlberg data guarantees that no information of the content of the hard drive is passed on to any other person, company or authority. The only exception is if the hard drive contains evidence of serious crimes. A written NDA can be made.

Ahlberg data does not take responsibility for any goods for more than three months after the recovery is done, unless another agreement has been found due to special circumstances.

Ahlberg data will remove hard drives and other storage media from enclosures, such as laptops or USB cabinets but does not give any warranty regarding the state of the enclosure after the removal of the storage unit.

I hereby agree to the general terms:

Advice on how to pack the hard drive

It's important to pack the hard drive carefully to avoid unnecessary transport damage to the hard drive during transport from your destination to Ahlberg data. A bubble plastic envelope is not sufficient since it doesn't protect enough against shocks that the hard drive may be submitted to during transport. Some of the components inside of the hard drive are very delicate and break easily.

Use a box at least 10 centimeters thick if you're sending a normal (3,5 inch, desktop size) hard drive to us. Pack thoroughly with shock absorbing material around the hard drive, for example foam rubber, cellular plastic, bubble plastic or crumpled paper. For a 2,5 or 1,8 inch laptop hard drive it's enough if the box is about 5 centimeters thick. Of course you can also choose a thicker box for maximum safety.

It has happened a couple of times that hard drives have been seriously mechanically damaged during transport to us because of careless handling of the transporter in combination with insufficient packaging of the hard drive. It has *never* occurred that a well packed hard drive in a big enough box has been broken during transport to us.

We recommend that you choose a transporter such as **UPS, DHL, FedEx, TNT** or similar for the transport of the hard drive. It usually takes only one day for us to receive the package within Europe and it's delivered door to door. Of course there are budget alternatives if time is not a critical factor and you want to save money. In that case we recommend the **Postal Service**.

Don't send a hard drive or any other storage media to us as a regular letter even if it's allowed by your Postal Service. The risk is very high that the package will be lost or stolen on the way. You will not get any compensation for the value of your data or for the hard drive itself if that happens.

Finally: Don't forget to fill out the service form and put it in the box together with the hard drive so we know who is the sender and who to contact after we have examined it.

Kindest Regards / Ahlberg data
